1.1 Introduction to Project Theme:

The project **Web Application for Dental Clinic Appointment System** is a web-based application created to make the daily work of a dental clinic easier and more organized. The main purpose of this system is to help patients book appointments online and to help the clinic manage appointments and patient information digitally.

In many clinics, appointments are still handled using phone calls or notebooks. This method is time-consuming and can cause problems like lost records, missed appointments, and no proper reminders for patients. This project solves these problems by providing an online system where patients can book appointments easily and receive automatic email reminders.

The system is designed to:

- Save time by reducing manual work.
- Improve patient experience with online appointment booking.
- Help the clinic manage data in a simple and organized way.

This project uses modern web technologies to build a simple and useful system that improves communication between patients and the clinic while making clinic operations more efficient.

1.2 Working of System:

The Dental Clinic Management System is designed to simplify the process of managing appointments, patient records, and automated reminders. The system works through different modules that interact with each other to ensure smooth clinic operations.

1.2.1 Patient Side Working

1. The patient visits the website.
2. The patient can:

    - ✓ View available dental services.
    - ✓ Book an appointment by filling in personal details, preferred date, and time.
    - ✓ Submit contact or inquiry forms.

3. After submitting the appointment form:

    - ✓ The system stores the details in the database.
    - ✓ A confirmation message is shown to the patient.

4. Before the appointment:

    - ✓ The system automatically sends reminder emails (24 hours and 4 hours before the appointment).

1.2.2 Admin Side Working

1. The admin logs into the admin panel using secure credentials.
2. After login, the admin can:

    - ✓ View all appointments.
    - ✓ Filter appointments by date or status.
    - ✓ Update appointment status (Pending, Confirmed, Completed, Cancelled).
    - ✓ Manage services offered by the clinic.
    - ✓ View contact messages and patient inquiries.

3. All updates made by the admin are stored in the database instantly.

1.3 Need & Scope of Proposed System:

Need of the Proposed System –

The need for the proposed system arises from the increasing demand for digital solutions in healthcare services. Managing a dental clinic using manual methods is time-consuming, inefficient, and prone to errors. Therefore, there is a strong need for a system that can automate appointment booking, improve patient communication, and manage clinic data in a structured and reliable manner.

The proposed system provides an online platform that allows patients to book appointments easily without visiting the clinic or making phone calls. This saves time for both patients and clinic staff. The system also generates a unique appointment ID for every booking, which helps patients track their appointment status and access reports.

One of the major needs of this system is to introduce **automation** in daily clinic operations. By using automated email reminders, the system ensures that patients are informed about their appointments in advance. This reduces missed appointments and improves overall clinic efficiency.

The proposed system is designed to fulfil the following needs:

- Reduce manual work for clinic staff
- Provide easy online appointment booking
- Improve communication with patients
- Maintain digital and secure patient records
- Send automatic appointment reminders
- Improve time management and service quality

Scope of the Proposed System -

The scope of the proposed system defines what the system can do and what features are included in the project. This system focuses on the core functionalities required for a dental clinic.

The scope includes:

- Online appointment booking system
- Service selection by patients
- Unique appointment ID generation
- Admin panel for clinic staff
- Email-based reminder system
- Contact and feedback management
- Uploading and viewing patient reports
- Basic clinic settings management

The proposed system is mainly designed for small and medium dental clinics. It is scalable and can be extended in the future by adding features such as SMS reminders, online payments, and patient login system.

Overall, the proposed system aims to improve efficiency, accuracy, and patient satisfaction by providing a modern digital solution for dental clinic management.

1.4 Organization Profile:

The **Aabha Dental Clinic** is a healthcare organization that provides professional dental care services to patients. The clinic is committed to delivering high-quality treatment, maintaining hygiene standards, and ensuring patient comfort and satisfaction.

The clinic offers various dental services such as general check-ups, teeth cleaning, cavity treatment, root canal treatment, tooth extraction, cosmetic dentistry, and other specialized dental procedures. The clinic is managed by qualified dental professionals and supported by trained staff to ensure smooth operations.

The main objective of the clinic is to provide safe, affordable, and reliable dental care while maintaining proper patient records and appointment scheduling. The clinic focuses on improving patient experience through timely service and clear communication.

With the increasing number of patients and appointments, the clinic requires a digital system to manage appointments, patient information, and reminders efficiently. The Dental Clinic Management System helps the organization reduce manual work, improve accuracy, and enhance overall productivity.

The organization believes in adopting modern technology to streamline operations and provide better healthcare services to patients.

2.1 Objectives of the System

The main objectives of the Dental Clinic Management System are:

1. To automate appointment booking and reduce manual paperwork.
2. To manage patient records efficiently in a secure digital database.
3. To provide an easy interface for admin to view, update, and manage appointments.
4. To send automatic reminders (24 hours and 4 hours before appointment) to reduce missed appointments.
5. To improve communication between patients and the clinic through email notifications.
6. To allow filtering and reporting of appointments based on date and status.
7. To ensure data accuracy and security using proper authentication and database management.
8. To reduce time consumption and human errors in scheduling and record maintenance.
9. To enhance overall clinic efficiency and patient satisfaction.

2.2 Software Requirement Specification:

2.2.1 Patient Module

- The system shall allow patients to view available dental services.
- The system shall allow patients to book an appointment.
- The system shall store patient details such as name, contact number, email, date, and time.
- The system shall display confirmation after booking.

2.2.2 Admin Module

- The system shall allow admin login using secure authentication.
- The system shall allow admin to view all appointments.
- The system shall allow filtering appointments by date and status.
- The system shall allow admin to update appointment status (Pending, Confirmed, Completed, Cancelled).
- The system shall allow admin to manage services (Add, Edit, Delete).

2.2.3 Reminder System

- The system shall automatically send reminder emails 24 hours before the appointment.
- The system shall automatically send reminder emails 4 hours before the appointment.
- The system shall prevent duplicate reminders.

2.2.4 Contact Module

- The system shall allow patients to send messages or inquiries.
- The system shall store contact messages in the database.
- The admin shall be able to view submitted messages.

3.4 System Requirements:

3.4.1 Hardware Requirement:

Component	Minimum Requirement
Processor	Intel Core i3 or above
RAM	4 GB or more
Hard Disk	128 GB free space
Monitor	1024x768 resolution minimum
Network	Internet connection for online access(must)

3.4.2 Software Requirements:

Component	Requirement
Operating System	Windows/Linux/MacOS
Front-End Technologies	React.js, Next.js
Back-End Language	Node.js (Next.js API Routes)
Web Server	Vercel (Cloud hosting) / Localhost
Database	PostgreSQL
Browser	Chrome, Firefox
Email Service	Nodemailer (Gmail SMTP)
Development Tools	VS Code, Git, GitHub

4.1 Database Design (Data Dictionary):

A) Table Name: Admin

Sr_No	Field Name	Data Type	Description
1	Id(PK)	serial	Store admin id
2	Username	varchar(25)	Store username
3	Password_hash	varchar(255)	Store password
4	Last_login	timestamp	Store last login time

B) Table Name: Appointments

Sr_No	Field Name	Data Type	Description
1	id(PK)	serial	Store record id
2	name	varchar(255)	Store patient name
3	phone	varchar(11)	Store patient phone no
4	email	varchar(255)	Store patient email
5	service_name	varchar(255)	Store service name
6	preferred_date	varchar(255)	Store Appointment date
7	preferred_time	varchar(255)	Store Appointment time
8	status	varchar(50)	Store appointment status
9	notes	varchar(255)	Store extra notes
10	created_at	timestamp	Store creation date
11	appointment_id	varchar(255)	Store appointment id
12	at	varchar(255)	Store clinic location
13	reminder24h	Boolean	Store reminder sent or not
14	reminder4h	Boolean	Store reminder sent or not

C) Table Name: contactmessages

Sr_No	Field Name	Data Type	Description
1	id(PK)	Int(series)	Store contact id
2	name	varchar(255)	Store name
3	phone	varchar(20)	Store phone
4	email	varchar(255)	Store email
5	status	varchar(50)	Store contact status
6	created_at	timestamp	Store creation time

D) Table Name: Documents

Sr_No	Field Name	Data Type	Description
1	id(PK)	Int(serial)	Store document id
2	report_id(FK)	varchar(255)	Store report id
3	name	varchar(255)	Store document name
5	url	text	Store document url
6	type	varchar(50)	Store document type
7	created_at	timestamp	Store creation time

E) Table Name: Faq

Sr_No	Field Name	Data Type	Description
1	id(PK)	int(serial)	Store faq id
2	question	text	Store faq question
3	answer	text	Store faq answer
4	display order	integer	Store faq display id

F) Table Name: Medicines

Sr_No	Field Name	Data Type	Description
1	id(PK)	Int(serial)	Store medicine id
2	report_id	integer	Store report id
3	name	varchar(255)	Store medicine name
4	dosage	varchar(255)	Store medicine dosage
5	created_at	timestamp	Store creation time

G) Table Name: Reports

Sr_No	Field Name	Data Type	Description
1	id(PK)	series	Store report id
2	appointment_id(FK)	varchar(255)	Store appointment id
3	diagnosis	text	Store diagnosis
4	observations	text	Store observations
5	treatment	text	Store treatment
6	next_visit	date	Store next visit date
7	created_at	timestamp	Store creation time

H) Table Name: Reviews

Sr_No	Field Name	Data Type	Description
1	id(PK)	serial	Store review id
2	Patient_name	varchar (100)	Store patient name
3	Service	varchar (100)	Store service name
4	rating	integer	Store rating
5	comment	text	Store comments

I) Table Name: Services

Sr_No	Field Name	Data Type	Description
1	id(PK)	serial	Store service id
2	name	Varchar(255)	Store service name
3	category	Varchar(255)	Store service category
4	description	text	Store service description
5	Image_url	text	Store service url
6	Is_active	boolean	Store service is active or not

5.1 User Manual:

1. Introduction

The Dental Clinic Management System is a web-based application designed to manage appointments, patient details, and automated reminders for a dental clinic. This system helps reduce manual work and improves overall efficiency.

2. System Access

The system has two types of users:

1. Patient
2. Admin

3. Patient User Guide

3.1 Viewing Services

- Open the website.
- Navigate to the Services section.
- View the list of available dental treatments.

3.2 Booking an Appointment

1. Go to the Appointment page.
2. Fill in the required details:
    - Name
    - Contact number
    - Email
    - Preferred date
    - Preferred time
3. Click the Submit button.
4. A confirmation message will be displayed after successful booking.

3.3 Receiving Reminder Emails

- The system automatically sends:
    - One reminder 24 hours before appointment

    - One reminder 4 hours before appointment
- No action is required from the patient side.

4. Admin User Guide

4.1 Admin Login

1. Go to the Admin Login page.
2. Enter username and password.
3. Click Login.

4.2 Viewing Appointments

- After login, the dashboard displays all appointments.
- Admin can:
    - View appointment details
    - Check patient information
    - See appointment status

4.3 Filtering Appointments

- Filter by:
    - Date
    - Status (Pending, Confirmed, Completed, Cancelled)
    - Search by patient name

4.4 Updating Appointment Status

- Select an appointment.
- Change status as required.
- Save changes.

4.5 Managing Services

- Add new service
- Edit existing service
- Delete service

4.6 Viewing Contact Messages

- Admin can view messages submitted by patients.

5. Reminder System

- A background scheduler runs automatically every 30 minutes.
- The system checks upcoming appointments.
- Reminder emails are sent automatically.
- Duplicate reminders are prevented.

6.1 Conclusion:

The Dental Clinic Management System successfully provides a digital solution for managing clinic operations efficiently. The system allows patients to book appointments easily and enables the admin to manage appointments, services, and patient records in a structured manner.

The implementation of automated reminder emails (24 hours and 4 hours before appointments) helps reduce missed appointments and improves communication between patients and the clinic. The use of a secure database ensures proper data storage and retrieval.

Overall, the system reduces manual work, minimizes errors, saves time, and improves the productivity of the clinic. This project has demonstrated how modern web technologies can be applied to solve real-world healthcare management problems.

6.1 Further Enhancements:

The system can be improved and expanded in the future with the following enhancements:

1. **Online Payment Integration**
   Allow patients to pay consultation fees online during appointment booking.
2. **SMS Reminder Integration**
   Add SMS notifications along with email reminders.
3. **Patient Login System**
   Provide login access for patients to view appointment history and update details.
4. **Doctor Panel**
   Create a separate dashboard for doctors to manage their schedules.
5. **Reports & Analytics**
   Generate graphical reports for daily, monthly, and yearly appointments.
6. **Multi-Clinic Support**
   Expand the system to manage multiple clinic branches.
7. **Mobile Application**
   Develop an Android/iOS application for easier access.
8. **Rescheduling & Cancellation Feature**
   Allow patients to reschedule or cancel appointments online.
